Persons with disabilities and COVID-19

What makes them vulnerable?

Using data from the 2017 Canadian Survey on Disability¹, this infographic provides a snapshot of potential areas of impact and unique challenges persons with disabilities may face during the pandemic.

Among the 6.2 million Canadians aged 15 and older with a disability, **21%** (or 1.3 million) were living alone.

778,000

of those with a disability considered themselves housebound due to their condition.

Almost

half (49%) of those with a disability received help with daily activities because of their condition.

36% relied only on help from outside their household.2

Of those:

- 38% considered themselves housebound due to limited social connections outside the home.
- 74% received help with daily activities because of their condition.

Among those with a disability, almost one in five (19%) reported that they do not use the Internet.

In 2017, almost **1.4 million (42%)** Canadians aged **70 and older** living in a private dwelling had a disability.

The Public Health Agency of Canada has identified older adults as a vulnerable population, with increased risk of severe outcomes from COVID-19.

Canada 42% Territories N.L. 50% 34% B C Alta. 44% Sask. Man. 45% 45% Que. 47% P.E.I. 28% 42% 48% N.S. 44% N.B. 44%

- 1. The Canadian Survey on Disability covers Canadians aged 15 years and older, living in private dwellings, whose everyday activities are limited
- because of a long-term condition or health-related problem.

 2. This includes help from family members not living with them, friends or neighbours, or both paid and unpaid organizations or individuals.
