CCHA is partnering with 3D Heart Project.

Congratulations to Dr. Carolina Escudero and her 3D Heart project team for winning the \$10,000 viewers choice prize from WCCHNs 2022 BoostUP competition!

CCHA is excited to announce we have partnered with the 3D Heart Project, an innovative cardiac project whose vision is to improve understanding for children, adults and their families of their heart defect and diagnosis by creating an open and freely accessible educational resource using 3D models. Education and access to CHD resources for individuals and families and trainees is vital to being engaged in your healthcare.

The website has launched with the first model - HLHS post Glenn 3dheartproject.com

To learn more, check out their video [3d Heart Project - YouTube](#)

Great to have patient engagement included in the design and resources and we look forward to the next steps.
